AWS Control Tower Assessment and Accelerator

Quickly assess, enable, deploy, and maintain your secure, multi-account AWS environment with AWS Control Tower.

aws PARTNER Advanced Tier Services

aws PARTNER Well-Architected Partner Program

aws PARTNER Digital Workplace Software Competency

aws Qualified Software

Does your business need to scale your cloud infrastructure securely and efficiently?

Control Tower is a set of AWS native services that allows you to set up and govern a secure, multi-account AWS environment using best practices.

With AWS Control Tower you can:

Govern a multi-account environment

Deploy AWS best practice Blueprints and Guardrails

Monitor compliance status using a single dashboard

Automate account creation based on AWS best practices

Rego is ready to partner with you to assess, enable, deploy, and maintain a well-architected, multi-account AWS Control Tower environment.

Key Activities

Assess: Evaluate your current cloud environment(s) including your security controls, AWS accounts, processes and governance, and risks. Receive a roadmap of recommendations to ensure Control Tower is deployed using well-architected best practices. If you already have Control Tower, we will evaluate your current environment.

Enable: We help your organization with Control Tower readiness. This includes preparing the structure and configuration for Control Tower and laying the strategic groundwork for a successful deployment.

Deploy: Successfully set-up and launch your AWS Control Tower environment, including establishing your landing zone, controls (guardrails), dashboard, integrations, and migrating your AWS accounts. This includes automating compliant account provisioning and centralizing your identity access. We also specialize in customizing your AWS Control Tower landing zone to fit your needs using Customizations for AWS Control Tower (CfCT).

Maintain: We will show you how to maintain your well-architected Control Tower environment, including setting up maintenance automations and installing upgrades. We also offer managed support for your Control Tower environment.
