Let Rego Be Your Guide

# Drive Down Cloud Costs with IBM Turbonomic

*Manage and continuously optimize your public, private, and hybrid cloud environments with intelligent automation*

Let Rego + IBM help you drive down costs and optimize performance for AWS, Azure, Google Cloud, Kubernetes, data centers, and more

IBM Turbonomic, an APM/ARM solution, uses AI-powered automation to continuously analyze and optimize application resource consumption across your entire IT infrastructure, ensuring peak performance at the lowest possible cost.

## What can it do?

- Lower your cloud bills.
- Cloud optimization.
- Cloud migration planning.
- Data center modernization.
- FinOps automation.
- Kubernetes optimization.
- Reduce over-provisioning cloud resources.

## Why IBM Turbonomic?

- Maximized performance, minimized costs.
- Reliable automation for all teams.
- Continuous resource optimization.
- Scenario planning for smarter decisions.
- Unified data across teams.
- AI-driven actionable insights.

## Key Statistics

Return on investment (ROI)  
**247%**

Net present value (NPV)  
**\$9.86M**

## Get started: Rego Can Guide Your Successful Turbonomic Implementation

Rego Consulting provides expert guidance and hands-on assistance to seamlessly implement Turbonomic in your unique environment, so that you can leverage benefits quickly. We deliver a fully integrated Turbonomic instance, along with comprehensive knowledge transfer and customized documentation of configurations, policies, and automation workflows to empower your team for ongoing management and optimization.

### Challenges

### Succeed with Rego

Implementing Turbonomic without proper expertise can lead to configuration errors, delayed time-to-value, and unrealized ROI.

Rego experts ensure a smooth and error-free Turbonomic implementation, minimizing disruption to your IT operations.

Integrating Turbonomic with your existing IT infrastructure and tools (e.g., VMware vCenter, AWS, Azure) requires careful planning and execution.

Rego experts configure Turbonomic to integrate seamlessly with your environment, including public cloud platforms, on-premises infrastructure, and container orchestration systems like Kubernetes.

Defining the right policies and automation workflows aligned with your business objectives is critical for Turbonomic to deliver optimal results.

Rego works closely with you to understand your business goals and tailors Turbonomic policies and automation to align with your objectives, ensuring actions are aligned with business needs.

## Get Support: Obtain peace of mind with Rego's Support

Already using Turbonomic, but need help with support or getting more value out of your investment?

Rego Consulting provides expert Turbonomic support services to keep your environment optimized for performance and cost-efficiency.

**Tailored support** aligned with your SLAs.

**Prevention of performance issues** and cost overruns.

**Detailed incident reports** with root cause analysis.

**Efficient troubleshooting** to reduce downtime.

**Proactive performance reports** and optimization recommendations.

**Ongoing optimization** with the latest features and best practices.

**Knowledge transfer** and customized documentation for your team.

Don't let performance issues and escalating cloud costs hold your business back. Contact us today to learn how Turbonomic can help you achieve continuous application performance assurance while optimizing your IT spend.
