Nudge for Clarity

Uncover Hidden Project Health Signals from Teams and Stakeholders Before Delivery Slips

Are your projects "green" – until they suddenly aren't?

RAG status can stay green even as risk builds. Team members often sense delivery risk early, but without a consistent way to capture the signal, corrective action comes too late.

Nudge transforms Microsoft Teams into an early warning system for Clarity by capturing real-time sentiment, confidence, and risk signals directly from your teams and stakeholders.

Value is created at every level: project, portfolio, and executive.

Early warning

Detect risk earlier than status reports

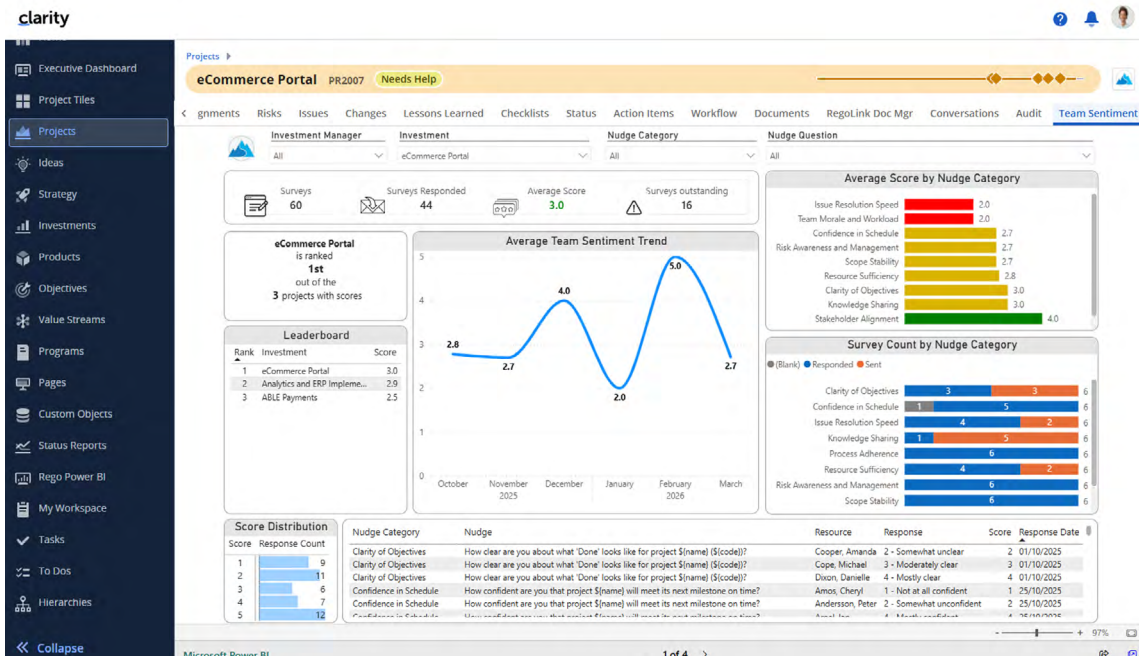

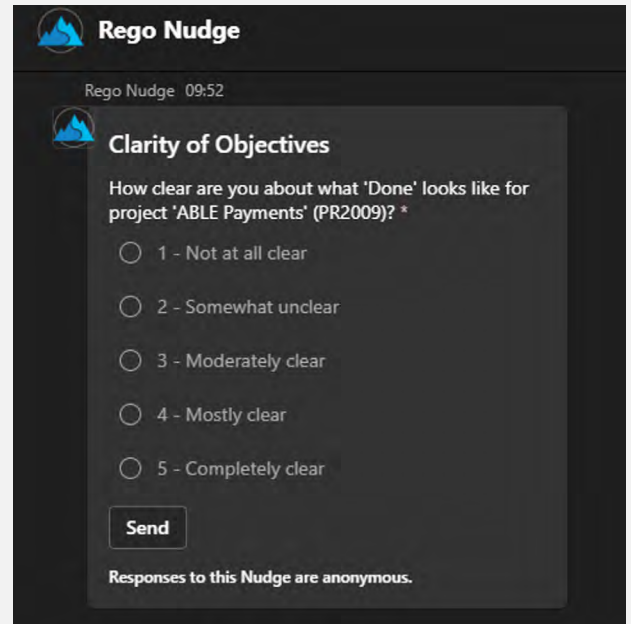

Faster intervention

Prioritize support before timelines slip

Actionable insight

Keep signals in Clarity for reporting and decision-making

How Nudge Changes the Game

Identify risk early with lightweight sentiment, confidence pulses, or milestone-based check-ins

Capture human signals alongside delivery data for richer understanding of project health

Prioritize intervention by clearly highlighting at-risk areas

Strengthen leadership conversations from basic "Are we on track?" to proactive "What support is needed now?"

How It Works

Configure Nudges directly in Clarity (anonymous responses supported)

Send targeted questions through MS Teams to selected users

Capture responses with single-click micro-surveys

Store and report on results in Clarity across project, program, portfolio, and roadmap levels

Track trends over time to guide effective action

What You Get

Quick implementation (typical rollout: 1-10 days)

Microsoft Teams bot for seamless delivery

Starter configuration with proven templates

Admin enablement and reporting guidance

Start Seeing What Your Status Reports Miss

Nudge is available on a free 30-day, no-commitment trial. Book a 30-minute discovery call to see how Nudge can benefit your organization.
