

Rego's Data Processor

With Rego Consulting's Data Processor, Clarity integrations are faster, easier, and more secure. Replace tedious GEL scripting with configurable actions, enforce best practices automatically, and keep sensitive data protected.

Make Integrations Easier

Do your teams struggle to build and maintain inbound integrations into Clarity?

Flat file and API data must be validated, loaded, and monitored for errors, but the process is slow and requires expert-level GEL knowledge.

Inbound integrations are difficult to develop and maintain.

Errors must be reported clearly.

GEL development is tedious, and Clarity needs an editor.

Governors, memory issues, and performance constraints add more challenges.

No secure way to store access credentials.

No support for encrypted files.

The Rego Solution

Rego's Data Processor solves these integration headaches with configurable, enterprise-ready actions without requiring GEL.

Configurable actions replace the need to hand-code integrations.

Built-in best practices from hundreds of Rego deployments.

Workarounds for governors, memory, and performance issues.

Secure "Connection Manager" for encrypted credential storage.

Support for PGP encrypted files for enhanced security.

Benefits

Faster Development –
Configurable actions accelerate integration setup.

Easier Maintenance –
Modifications and updates are simple.

Enforced Best Practices –
Proven integration patterns built in.

Better Performance –
Optimized execution reduces errors and delays.

Stronger Security –
Connection Manager + PGP encryption safeguard sensitive data.

Deliverables – What's Included

Data Processor packaged with pre-built integrations.

XOG files, GEL scripts, and integration templates to jumpstart development.

Free updates with no annual maintenance costs.

What You Can Expect with Rego

Define your integration (common: Inbound Resource, Inbound Financial Transaction).

Provide requirements and a sample file or API payload.

Review documentation for standard integrations.

Grant admin access to your development environment.

Initial development and testing typically completed in 1–2 weeks.

Rego's **Data Processor** makes Clarity integrations simple and secure!

Contact your Rego Account Manager today to get started.
