Role-Based Planning in Roadmaps:
Optimizing Demand & Capacity Reporting

Struggling to match Roadmap demand to actual team roles?

You no longer have to be limited by the default capacity and demand functionality in Roadmaps, which only provide an overall view of resources. **With Rego's innovations, you can see demand and capacity visibility by specific roles, providing detailed insights for better planning and execution.**

How Rego Solves the Problem

- View capacity and demand for each role individually.
- Select key roles to include in your roadmap evaluation.
- Visualize capacity with card-based targets, highlighting over/under capacity.

Value to Your Organization

- Gain critical insights into labor needs with role-based demand and capacity evaluation.
- Improve long-term planning by accurately predicting future resource requirements.
- Identify resource risks and contentions in current execution through detailed role-based analysis.

Deliverables

- Custom attributes for each role for use in Roadmap widgets and grids.
- A process for updating role allocations in Roadmaps.
- Demand and capacity-focused views for better decision-making.
- Documentation on adding or removing roles from Roadmaps.

Scope of Service

- **Time Commitment:**
  4-8 functional hours if roles are well defined.
- **Prerequisites:**
  Mature role creation and resource allocation process.
